

LOW ANGLE RESCUE COMPETITION

PROVIDED BY KYEM

Area in which to engage in the competition
Mannequin (may be provided)

PROVIDED BY PARTICIPANTS

Stokes or other similar litter
Lashing material for litter
Static nylon kernmantle rope
Prusik cord or safety devices
Anchor material
Descent control device
Pulley for ascent
Personal safety equipment
Any other equipment needed

GENERAL

This is a team event and a team for this event shall consist of not less than 10 nor more than 15 members.

If a mannequin is not available, a person who is not a member of the team may be used as the patient and not count against the maximum number for the team or any other person, not a member of the team who agrees to be the patient may be used.

SCENARIO

A "patient" will be located approximately 75 feet down slope
The team shall package the patient in the litter and set up a low angle rescue system using a safe anchoring point
The team shall raise the patient to the top of the slope and lower the litter with the patient remaining in the litter
The team shall convert the raise system to a descent system
The team shall raise the litter and return the patient to the starting point using the descent system, place the litter on the ground and release the patient from the litter

Time limit for the competition is 60 minutes. At 60 minutes the Judge will call time and the litter will be lowered and the patient released.
